PROFESSIONAL SUMMARY

Final-year B.Tech (CS — Data Science, 2026) graduate with hands-on experience building, training, and deploying ML/DL models end-to-end. Delivered clinical-grade cancer classification (94% accuracy) and production-ready crop-disease detection (92% accuracy) using CNNs and deep neural networks. Skilled in the full ML lifecycle — from EDA and feature engineering to hyperparameter tuning, evaluation, and GitHub deployment. Actively upskilling in LLMs, RAG pipelines, and GenAI (Vertex AI certified). Available immediately.

TECHNICAL SKILLS

Languages	Python (advanced) · C++ · Java · JavaScript · SQL
ML / AI	Supervised & Unsupervised Learning · Classification · Regression · Clustering · Feature Engineering · Ensemble Methods · Hyperparameter Tuning
Deep Learning	TensorFlow · Keras · PyTorch · CNNs · RNNs · LSTMs · Transfer Learning · Transformers (BERT)
GenAI / LLM	Prompt Engineering (Vertex AI) · LLM API Integration · RAG fundamentals · LangChain basics
Data & EDA	Pandas · NumPy · Scikit-learn · Matplotlib · Seaborn · OpenCV
MLOps/Tools	Git · GitHub · Google Colab · Jupyter · VS Code · Docker (basics)

KEY PROJECTS

Cancer Tumour Classification — Deep Neural Network · github.com/fiercing-fury/cancer-classification

| Python · TensorFlow · Keras · Scikit-learn

- Designed a deep sequential neural network on the Wisconsin Breast Cancer dataset (569 samples, 30 features) to classify malignant vs. benign tumours.
- Applied MinMaxScaler normalisation + Dropout layers + Early Stopping to eliminate overfitting.
- Achieved 94% accuracy & 95% F1-score — meeting clinical-grade diagnostic thresholds; model screens patients instantly vs. days for manual pathology.

Plant Disease Diagnosis — Convolutional Neural Network · github.com/fiercing-fury/plant-disease-diagnosis

| Python · TensorFlow · Keras · OpenCV · CNNs

- Architected a multi-class CNN to classify 38 plant disease categories from leaf images; used data augmentation to resolve class imbalance.
- Achieved 92% classification accuracy, validating production-level reliability for precision agriculture deployments.
- Reduced manual disease identification time by an estimated 90%, with direct applicability to AgriTech CV pipelines.

Movie Recommendation System — Collaborative Filtering · github.com/fiercing-fury/movie-recommendation

| Python · Pandas · NumPy · Scikit-learn · MovieLens 100k

- Engineered an item-based collaborative filtering engine computing Pearson similarity across 1,682 movies and 100,000+ ratings.
- Filtered to movies with 100+ ratings to ensure statistical significance; delivered personalised top-N recommendations — core RecSys skills used at Netflix, Amazon, Spotify.

EDUCATION

B.Tech — Computer Science & Engineering (Data Science) · [Galgotias College of Engineering & Technology, Greater Noida](#)
India | 2022 – 2026

CERTIFICATIONS & ACHIEVEMENTS

- Google Cloud Skill Badge — Prompt Design in Vertex AI (GenAI & LLM prompt engineering)
- Udemy — Data Science & Machine Learning with Python (end-to-end ML pipelines)
